Journal Impact Factor 📄 【JCR影响因子】

The Journal Impact Factor (JIF) is a journal-level metric calculated from data indexed in the Web of Science Core Collection. It should be used with careful attention to the many factors that influence citation rates, such as the volume of publication and citations characteristics of the subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the case of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers, institutions, or articles. [Learn more](#)

Journal Impact Factor contributing items 📄 Export

TITLE	CITATION COUNT
Unconventional superconductivity in magic-angle graphene superlattices	875
Perovskite light-emitting diodes with external quantum efficiency exceeding 20 per cent	573
Correlated insulator behaviour at half-filling in magic-angle graphene superlattices	545
Efficient, stable and scalable perovskite solar cells using poly(3-hexylthiophene)	530
Quantum supremacy using a programmable superconducting processor	474
The UK Biobank resource with deep phenotyping and genomic data	431 📄
RNA velocity of single cells	251
Itaconate is an anti-inflammatory metabolite that activates Nrf2 via alkylation of KEAP1	247
Planar perovskite solar cells with long-term stability using ionic liquid additives	231
A library of atomically thin metal chalcogenides	230

Rank by Journal Impact Factor

Journals within a category are sorted in descending order by Journal Impact Factor (JIF) resulting in the Category Ranking below. A separate rank is shown for each category in which the journal is listed in JCR. Data for the most recent year is presented at the top of the list, with other years shown in reverse chronological order. [Learn more](#)
